

TJ Krusinski

I am a JavaScript developer, I focus on building and designing Node.js applications. I care for the local community I am part of and do what I can to contribute to the open source community. I have founded 3 software companies and lead a Node.js Meetup locally in Orlando, FL. I also am a live, multi-camera video director and previously have been a photographer.

Education

I have an associates degree in Recording Engineering (Audio) from Full Sail University

May 2011

Work

Stream Monkey | streammonkey.com

May 2011 - February 2012

Stream Monkey is a live and on demand online video platform. Stream Monkey was created out of the desire to equip houses of worship with a low barrier of entry online video platform. Our focus was to provide excellent customer service unlike many of the video service providers of the time. I co-founded the company, contributed in the design of the video streaming architecture and built the first few versions of the web application, including analytics, payments and user on boarding. Stream Monkey has since gone on to expand their product offering and has doubled revenue year over year.

Futura IO | futura.io

July 2012 - Present

Futura IO is product development house. We originally started as a consulting firm, however moved out of that space. We have built various mobile and web apps for companies in the Orlando area and throughout the US. Our focus now is on creating our products and being part of the Orlando tech community.

Shoflo | shoflo.tv

September 2011 - March 2014

Shoflo is a software company that produces real-time communication tools for the live events industry. Shoflo came about after seeing a need in the live event production industry. The industry lacks formal tools to facilitate communication beyond email and printed paper. Shoflo's mission is to reform the Corporate production industry and then move into Broadcast and Sports. Shoflo was part of the first business accelerator based out of Orlando, FL and is currently seeking venture capital investment. I co-founded Shoflo and designed the current architecture that is made up many discrete, real-time Node.js services.

Freelance

January 2010 - Present

I have been part of many projects as a contractor, below is a partial list.

Wondermade | wondermade.com

Built the initial website, including cart and payment system in Node.js

Northland Church | northlandchurch.net

Assisted with the construction of a new site, including a real-time worship environment to engage their online congregation.

Real Thread | realthread.com

Design the architecture behind the site. Real Thread creates high end custom screen printed apparel. The architecture includes a large Salesforce integration.
